# Instructions

- Warm-up with easy problems first. Get few problems under your belt that you could solve under 15 minutes.
- Master one pattern at a time. Don't move forward until you become comfortable with current pattern.
- A problem can be solved with many different patterns, but to master the current pattern, solve the problem with the pattern it is listed under.
- Never spend more than one hour maximum per problem. If it is taking that much time, then this is not the right level for you yet. Go back to easier problems and redo them faster.
- If you cannot solve the problem within first 25 minutes, then get hints by looking at the solution from others.
- Repeat coding of each problem for three times. First time, it will take longer, but second and third time it will be very fast. With little extra time, you will gain a lot.
- After solving a problem, have a look at the solutions by others to pick good points and improve your solution.
- Join Algotab's video course to get video lessons, coding workspace, official solutions and solutions from others.
