Interview Details

Diving deep on what you'll be asked about and assessed on in your

5 minute read

To help you prepare for your interview, we want to share details of wh
interview will look like and what you will be assessed on. This post list
how your interview will be structured and assessed, as well as tips tha
candidates find helpful for succeeding in their interview. If you have a
questions about any of this, please don't hesitate to contact us or you
before your interview.

Interview philosophy

In general, we want your interview experience to be as much like regu
job programming as possible. Doing so yields a better experience for
gives us a more accurate sense of your skills. With that said, we unde
your interview will never be perfectly analogous to regular on-the-job
programming, as much as we strive for it to be. For example, there are
timing constraints than most work projects have, and the situation is h
pressure than your average work day.

We've structured our interviews with both of these ideas in mind: Mak
like a regular programming experience, but also being cognizant of th
which it fundamentally differs from a regular programming experience
result, our interviews may have some notable differences from other i
you've done.
